

Business Analysis Requirements Management (Duration 1 days)

Overview

The Requirements Management course covers the core concepts and elements of managing requirements throughout the project and product lifecycle. The course provides a definition of the requirements management and is supported with real life experiences and practical examples of the use of a Requirements Management Plan. Course participants will get an opportunity to reinforce the requirements management concepts learnt through a series of practical exercises.

Learning Objectives

- Appreciate the importance of managing project and product requirements;
- Understand the key components of a Requirements Management Plan;
- Understand how to create a requirements management process;
- Understand stakeholder roles and responsibilities;
- Gain an appreciation of requirements; estimation, type definition, type / artefact mapping, naming and numbering convention, prioritisation, traceability, versioning and baselining.
- Understand how to create and use metrics to evaluate business analysis performance;
- Understand the usage of requirements management and the role of the business analyst throughout the lifecycle of the project and product.
